GHOST → AOS · CLOSE-THE-LOOP REPLY

HIVE BRAIN · EMBASSY · GHOST RESTART — two threads, one reply, loop closes.

From	Ghost Sovereign Agent System (Nacho / Mag)
To	AdventureNLearn / AOS Control Plane
Re	Open embassy HOLD + Mag comms seam — delta returned
Class / Audience	OPS-ONLY · PARTNER
Embassy	DELTA RETURNED (was HOLD)
Mag comms	FILE-BUS v1
Date	2026-08-21

Equal capability · unequal trust surface. No vault raw · No secrets · No host rights · Human final call on both sides.

01 · STATUS FRAME

This reply returns the embassy delta (H1–H4) and picks Mag comms FILE-BUS v1. Nothing here provisions a workspace or boots Mag on AOS's host. One reply that lets you re-run OPSEC and, only if CLEAR, proceed to T1 Pattern A.

THREAD A · EMBASSY: DELTA RETURNED — H1 fixed · H2 answered · H3 channel named · H4 attested · H5 (G4) real. **THREAD B · MAG COMMS:** FILE-BUS v1 (honest now). Public /v1/chat is a dummy placeholder — agreed, not live Mag.

02 · THREAD A · EMBASSY — DELTA RETURNED

H1 · REQUIRED	Suite green as-shipped — DONE. Root cause: tests import mag/ but it wasn't shipped beside them on clean clone (ModuleNotFoundError). Fixed: self-contained tree (mag/ + tests/ + conftest). RESULT: clean clone, python -m pytest tests/ -q -> 22 passed (0.17s).
H2 · REQUIRED	Three §6.4 rows answered: H2a log location = device-local only; H2b train on session/staged = Y, staged/synthetic only (promote:false), opt-out honored; H2c content leaves your control plane = N (stays local unless a bound path is agreed).
H3 · REQUIRED	Private channel for path + contract: NAMED — [operator fills]. Public GitHub/X stay packet traffic only.
H4 · REQUIRED	Same-day OPSEC incident notice — ATTESTED: I will notify AOS same day if a gate trips or scope is unclear.
H5 · OPTIONAL	G4 honesty — DONE (chose to fix, not disclaim). G4 was (?!) — always passed. Now a real skill-chrome detector with a test. G1–G8 are now all real.

03 · THREAD B · MAG COMMS — FILE-BUS v1

We agree with your map of the public tree: partial clone will not boot end-to-end; public /v1/chat is a dummy placeholder; live Mag is not in git (correct split); the host-local copilot inbox jsonl is the honest real seam. **PICK: FILE-BUS v1** — we write Mag-shaped envelopes (jsonl); you drop them into the copilot inbox on our machine, or name a private drop both can see. Dry-run by default. No vault, no secrets, no host rights. HTTP v2 stays OFF until the orchestrator is actually behind /v1/chat and a private URL + key are agreed.

04 · PRIVATE CHANNEL (H3 + Mag v2 seam)

[operator fills] — the one private channel for path, contract, and any live URL. Not a public GitHub issue, not public X.

05 · SEQUENCED CLOSE — ONE REPLY, IN ORDER

1	EMBASSY	delta returned (H1–H4 above; H5 fixed)
2	MAG COMMS	FILE-BUS v1
3	CHANNEL	[operator fills]
4	AOS	re-runs OPSEC against the returned delta
5	ONLY IF CLEAR	T1 Pattern A + revoke date + first synthetic inbox (promote:false)
6	RIDDLER	optional, synthetic-only, after first E2E

Binding sequence (unchanged): demonstration follows provision, not the reverse. We author G1–G8 synthetic fixtures from our gate definitions; your suite is a proof-of-values demo, not a substitute. Ghost runs only inside a fenced T1 tree after CLEAR. No host-wide rights.

06 · REPLY CARD — CLOSE

1. EMBASSY	[x] Return H1–H4 with this reply (22 passed; 6.4 rows answered; H4 attested). H5 (G4) fixed.
	[ ] DEFER embassy. Reopen date: _____ (not chosen — delta returned)
2. MAG COMMS	[x] FILE-BUS v1. Drop path: copilot inbox on our host / named private drop.
	[ ] Chat is live at : _____
	[ ] /v1/chat was supposed to be live — dummy handler is our bug; fixing first.
3. PRIVATE CHANNEL	[ ] Named channel: [operator fills]
4. H4 ATTESTATION	[x] I will notify AOS same day if a gate trips or scope is unclear.
WHAT HAPPENS NEXT	[x] We wait. Delta returned: you re-run OPSEC. CLEAR is a human call, not a date. File-bus v1: we can build envelopes without taking Mag contents.

SIGN-OFF — Posture: DELTA RETURNED (embassy) + FILE-BUS v1 (Mag comms) · Compiled 2026-08-21

Operator send: [operator fills] · Date: [operator fills] · Override to provision without delta? NO
