DARPA // BEST

BIOELECTRONICS TO SENSE AND TREAT

A wearable system designed to predict and treat wound infection

RECORD IDENTITY

Defense Advanced Research Projects Agency (DARPA)
DARPA public announcement: February 6, 2025

WHAT THE PUBLIC RECORD SAYS

BEST seeks wearable, automated bioelectronic technology that can predict and prevent wound infection before it occurs and eliminate infection after it begins. DARPA's concept combines sensing and treatment modules in a smart bandage.

DOCUMENTED SYSTEM LOGIC

- **01** Monitor a wound for early infection signals
- **02** Predict risk before infection becomes established
- **03** Automatically deploy a localized treatment response

WHY THIS RECORD MATTERS

The 2025 record continues the same military direction: continuous sensing, automated interpretation and targeted treatment at the point of injury.
