DARPA // BIOSTASIS

SLOWING BIOLOGICAL TIME

Extending the Golden Hour after traumatic injury

RECORD IDENTITY

Defense Advanced Research Projects Agency (DARPA)
DARPA public announcement: March 1, 2018

WHAT THE PUBLIC RECORD SAYS

Biostasis explored temporary, reversible interventions intended to slow biochemical reactions inside cells after traumatic injury or acute infection. The stated military goal was to give medics more time before biological damage became irreversible.

DOCUMENTED SYSTEM LOGIC

- **01** Act at the molecular or cellular level
- **02** Slow biological processes for a limited period
- **03** Allow normal biological activity to resume after treatment

WHY THIS RECORD MATTERS

This is an official defense record describing an attempt to manipulate the rate of biological processes - not merely monitor a wounded patient.
