DARPA-FUNDED // REPAIR

THE $22 MILLION REGENERATIVE PATCH

AI, bioelectronics and regenerative medicine in one system

RECORD IDENTITY

DARPA-funded multi-institution research program
University public announcement: March 12, 2020

WHAT THE PUBLIC RECORD SAYS

A University of Pittsburgh-led team received a $22 million DARPA grant to develop the Regenerative Electronic Platform through Advanced Intelligent Regulation (REPAIR). The system was intended to support regrowth of muscle and surrounding soft tissue after combat injury.

DOCUMENTED SYSTEM LOGIC

- **01** Monitor molecular signals throughout wound healing
- **02** Use artificial intelligence to guide intervention timing
- **03** Deliver specific molecules to promote functional tissue regrowth

WHY THIS RECORD MATTERS

The grant record connects military funding, artificial intelligence, bioelectronics and regenerative medicine within a single adaptive healing device.
