Session dossier

Untangling engine record · timestamps to the minute · math anchors for scalar-knot analysis

Session ID	mag-agent-orc-tb635b4ef5d
Title	Mag agent · orc-tb635b4ef5d
Start (UTC)	2026-08-08T20:26:00Z · unix 1786220760
End (UTC)	2026-08-08T20:26:00Z · unix 1786220760
Date	2026-08-08 → 2026-08-08
Duration	0.0 minutes
Dossier written	2026-08-17T14:19:35.585022Z
Commit	sha256 ab0930c654b26b70…
Schema	session_dossier.v4_chord_knot
Chord commitment	chord-mag-hands-2cd604f6ba

Chord struck

Commitment: chord-mag-hands-2cd604f6ba · Framework root: e11937d605a89b022d13…

1 · Plain English

This session worked the knot around: mag_hands, biography. Latest operator pressure: “[OPERATOR GUIDANCE — queued while you were working] [ghost] Operator frustration detected: 'operator_escalate' appears 48 times in recent session digests. Inves”. Not a finished mirror — a living record of what was actually turned.

2 · Personal impact

Your future self’s ability to recall *what you were thinking* depends on this biographer trail.

3 · Rope

Biographer intent vs toy-like todo loops — what is the real product?

4 · Loops audited

- None flagged in extract.

5 · Disentangled moves

- 1. Re-read this dossier before inventing new epics next session.
- 2. Check scrum board if republic tickets were in flight.
- 3. Full transcript: memory/agent_sessions/<seat>.json (Mag agent seat).
- 4. Keep Steiniger as method inspiration — not a required AI persona to ship.
- 5. Treat session PDF + Verkle leaf as the residual bond of the day — re-read before new epics.
- 6. One disentangled next action only; refuse capture via rank/token/core.

6 · Self-audit

Self-audit: no obvious polish/enthrone flags in extract; still re-check personal impact.

Observer charts (interference is signal)

- ■ **Money machine** (score 0) — Quiet steering of option sets / capital / who can afford the path
- ■ **Secrets machine** (score 0) — Silence, leverage, asymmetric info, private data gates
- ■ **Fracture machine** (score 0) — Narrative inversion, headline conversion, attention break
- ■ **Personal rope** (score 0) — Operator’s own knots that make one story feel obvious (self-side first)

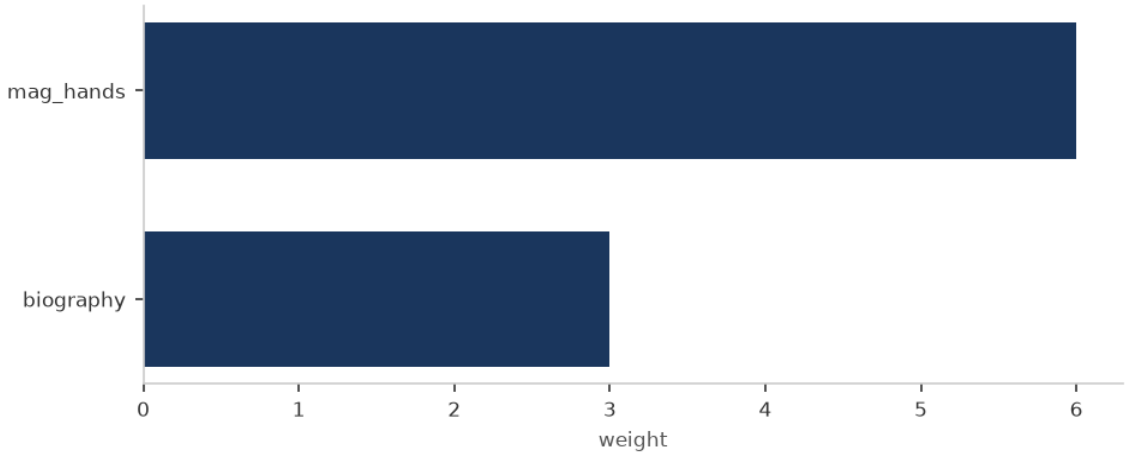
A · Scalar-knot anchors (analysis)

Proxies for later untangling (Steiniger-inspired). Not a full EUT solve. Use with minute timestamps for time-series comparison across sessions.

S_core (convention)	-8.0
β target	3.0
tension_index	0.325305
residual_weight	0.45
frame_occupancy	0.75
Q_proxy	22.5
gap_proxy	0.5
λ■_proxy	0.25
E_dirichlet_proxy	0.215278
theme L1 / L2	9.0 / 6.7082
theme entropy (nats)	0.636514
theme concentration	0.693901
dominant theme	mag_hands
duration (min)	0.0

Theme weight vector (fixed basis)

```
mirror_meta=0 mag_hands=6 scrum_plan=0 constitution=0 dashboard=0 harness=0 biography=3 data_r0=0
```



B · Untangling read (plain language)

What was under pressure

- Biographer intent vs toy-like todo loops — what is the real product?

Frames held

- ● **Build / tools** — What was being constructed (code, process, Mag).
- ● **Mirror / self** — How this relates to sovereign mirror & chord practice.
- ■ **Capture risk** — Where a new throne, toy theater, or data leak could form.
- ● **Personal stake** — What future-you needs from this session (recall, clarity).

Protected core

- Truth-only, personal impact — no flattery-as-product
- No new throne / rank / token privilege
- Operator data as identity source (not third-party persona as product)
- Consent and private tiers stay local

Residual bonds (keep)

- Mag (PSO companion) — bonded helper, not the hero
- Session-end biography as persistent meta
- Session-end chronicle → future-you can ask what you were thinking

Collapse risks

- Treating Mag todo-completion as if the mirror product were finished
- Collapsing multi-repo work into one “AI agent” brand story

Good moves

- Re-read this dossier before inventing new epics next session.
- Check scrum board if republic tickets were in flight.
- Full transcript: memory/agent_sessions/<seat>.json (Mag agent seat).
- Keep Steiniger as method inspiration — not a required AI persona to ship.
- Keep Mirror (meta) above Hands (chores) in the mental model
- Use dossier PDF + JSON as the high-fidelity residual of the session
- Attribute Steiniger methods; do not ship Saelis as required identity

C · Salient operator asks

- [janitor] Verkle tip is stale. Run verkle audit. Execute: python -m mag.verkle_audit --full and if errors found, python -m mag.verkle_audit --fix. Write a one-paragraph summary of what was fixed to memory/runs/ghost/autonomous_fixes/verkle_audit.md. This IS a mutating task — the verkle fix is safe. $0.
- [OPERATOR GUIDANCE — queued while you were working] [ghost] Operator frustration detected: 'operator_escalate' appears 48 times in recent session digests. Investigate the root cause and propose a fix. Apply per operator_directives (memory/operator_directives.md): execute autonomously; this overrides vague plan drift. Record the pick in working.md if significant.

D · Metaphors & ideas

Metaphors

- Mag (PSO companion) — bonded helper, not the hero

Ideas

- Session-end biography as persistent meta

E · Bibliography (filename · where · links)

Each item lists **filename**, **local path**, and **remote/HTML** when known. Local copies live under memory/ingest/local/. Blue text is clickable.

F · Open loops

- Re-read this dossier before inventing new epics next session.
- Check scrum board if republic tickets were in flight.
- Full transcript: memory/agent_sessions/<seat>.json (Mag agent seat).
- Keep Steiniger as method inspiration — not a required AI persona to ship.

Appendix · Machine index

Prefer sibling .dossier.json for computers. PDF is human scan. Time fields: time.*.iso_minute, time.*.unix_minute. Math: scalar_knot.*
