AOS

GOVERNANCE OPERATIONS AND YIELDS NETWORK

Hive Stand-Up

AOS platform · hive workplace · LPIN civic line
v5 freeze · dual workspace · Host bench after cull

CLASS: teaching pack · IDENTITY-AGNOSTIC
STATUS: we-have-a-record / incomplete
PACK DATE: 2026-09-21 · FREEZE: 2026-09-20

What this is. One stand-up so another careful builder can see how the workshop runs in two rooms that share one law: the AOS workplace in this cloud session, and the Host bot bench after the pending sidebar deletes. It is not a claim that cloning a repo copies the operator’s private hive.

SOMEONE ELSE CAN CONTINUE · HONEST HISTORY · HONEST WORK

America First | Truth-Seeking

1. Purpose and how to use this pack

This pack exists so a public collaborator can stand up the same workshop from public records and the live desk law printed here. It adds the missing piece from the 2026-09-21 bench snapshot: how the Host bot roster and this AOS session work as one shop after the cull.

Read in this order.

1. Read the honesty labels. Do not skip them.
2. Copy the OS spine names exactly. Do not invent extra owned names.
3. Treat the Host bench as the post-delete roster. Retired labels are not live seats.
4. Stand up public products from the clone table. Run the published audit commands.
5. Open a new conversation and paste the Hive Brain seed pack as message 1.
6. Run one sitting, one job. Declare a target class before you build.
7. Keep public civic surfaces free of meme chrome and operator-skill labels.
8. Add contact only at send time. This file stays identity-agnostic.

This pack is not a dump of private history, a host-PC runbook, a helper-source tree, a municipality catalog, a live Farce roster, or a claim that the live hive is now running on the reader's machine. Tokens spent are not a ship.

2. Honest state of this sitting

v5 is an OS freeze dated 2026-09-20. This pack is dated 2026-09-21. The post-v5 window is about one day. Treat that as a fact, not as a product release. The Host bench snapshot is the same date. Pending Host sidebar deletes are treated here as already gone from the live roster.

Claim	Score	Basis
v5 freeze dated 2026-09-20; platform AOS; workplace hive; civic line LPIN; network GOYNET; protocol GVCP 4	we-have-a-record	Working-memory OS spine written at boot. Owned names also appear on live desk skill pages in this session.
13 live desks exist and their duty pages are printable	we-have-a-record	Each desk has a SKILL.md in this session, version 5.0. Duty cards below are quoted from those pages.
35 helpers exist; OPSEC floor stamped at freeze	we-have-a-record (count only)	Working memory states the count and two file pointers. Those two files are not present in this cloud folder. Names are not printed.
Host live work-bot count after cull = 35	we-have-a-record	Bench inventory 2026-09-21: Command 4 + Home Office 3 + Builder 3 + Research 3 + Ops 2 + Writing 2 + Custom tools 3 + Sources 01–15 = 35.
Pending Host deletes D01–D15 + Lens Research room are not live	we-have-a-record (protocol)	Same bench file lists the delete labels and standing rule: agents cannot delete bots; Host right-click delete after D## label.
Public civic repos last pushed in a cluster around 2026-09-07	we-have-a-record	GitHub timestamps on LPINv3, NEXOSxLPIN, AOS-Hive-Brain, lpin-command-center, fifty.
New public product shipped after 2026-09-20	not-proven	No public git tag or push after the freeze was found this sitting.
HELPER-MAP and OPSEC-FLOOR file contents	not-proven here	Pointers exist. Files are missing from this cloud folder. Contents are not invented.
Recipient public handle requested a pack on X	not-proven	Request is operator-stated this sitting. No matching public post was used as a record.

Conversation search in this environment returned April–May 2026 public-product work, not the September hive cutover threads. That gap is printed so nobody pretends those threads were read here.

3. OS spine — owned names

Use these names. Do not mint parallel doctrine. Shop codes that are not on this list stay off public product.

Name	Meaning
AOS	The platform. Portable across hosts, clouds, and builders. Do not assume a personal machine, local path, or port map unless the operator of that sitting provides one.
hive	The workplace. Desks, helpers, and working pages live here. Hive chrome does not ride on public civic UI.
GOYNET	Governance Operations and Yields Network. Public expansion used on the operator X bio. A second public source (KeptItFroggy README) also uses GOYNET as a pond-radio joke beside FROGNET and says it is not an ethnic movement. Print both sources. Do not collapse them.
GVCP 4	Ground, Verify, Correct, Predict. A protocol on every job. Not four helpers and not four extra desks.
LPIN	Two public expansions exist. Do not pick one and hide the other. 1) Light · Proof · Integrity · Navigation — LPINv3 README. 2) Lily Pad Intelligence Network — lpin-command-center description.
Honesty labels	we-have-a-record / not-proven / people-disagree. Incomplete beats fake-complete. Human final call.
Talk	Plain English. Owned names above may be used. Other shop codes do not.
Share rule	Shareable files stay identity-agnostic. Contact is added at send time only.
Sitting law	One sitting, one job. One target tree per session.
Pickup rule	Build so someone else can pick up the work. Drop stale notes.

4. Integrity kernel and GVCP 4

This kernel is non-negotiable on public and local work. It is the same kernel printed in AOS-Hive-Brain docs/OPSEC.md and in the live desk pages.

#	Rule	Practice
1	**Tri-state**	Supported / Unproven / Disputed. In workshop talk: we-have-a-record / not-proven / people-disagree. Same idea.
2	**Basis labeled**	Evidence / Inference / Assumption. Never mint a record from confidence.
3	**Clean-share gates**	Do not ship a false complete picture. A hole stays a hole.
4	**Primary records first**	A filing, a commit, a skill page, a dated README. Commentary is second.
5	**Human final call**	Software never auto-truths. Multi-tool agreement is not proof.
6	**Honest incomplete**	Prefer an open cell over invented fill.
7	**No private PII**	None in samples, demos, packs, exports, or chat that might be promoted.

GVCP 4 — the work order, not a roster

Step	Means	Does not mean
Ground	Put the claim on a primary record, or say there is none.	A scrape is not Ground.
Verify	Label we-have-a-record / not-proven / people-disagree.	Two weak lanes colliding is not Verify.
Correct	Fix the page, the kit, or the build so it matches the scores.	Rewriting history to look finished.
Predict	A labeled next-action or forecast.	A finding. Predict is never a record.

GOYNET rule on contested ships. The network does not approve a ship that skipped Ground or Verify. That sentence is the live claim-check desk talking, not a slogan.

5. Sitting law and target classes

Every complex job declares a class before anyone builds. Mixing classes is how private chrome leaks onto public civic surfaces.

Class	What it is	Ship rule
public-suite	Civic tools a stranger can fork and run.	OPSEC-clean. No PII. No municipality fixtures. No skill brands in UI.
pattern-lab	Experiments, meme desk, tutor labs, 3D toys.	Do not promote raw. Dual-track: local free, public audited.
ops-only	Working pages, file-bus, freeze notes, bench maps.	Not a public product. Identity-agnostic if it ever leaves the box.
archive	Frozen trees. Honest history.	Do not treat as live. Do not silently revive.
teaching pack	This file. Stand-up for another builder.	Identity-agnostic. Scores printed. Contact blank until send.

Working page fields: purpose · decisions · tasks · notes · numbers · open risks · checks · growth log · target class. Coordinator owns the spine, the route, the synthesis, and the last software sign-off. The human operator owns polish and the last human call.

Three lanes under AOS (routing shorthand — not product UI)

Lane	Does	Maps onto live desks
Make	Build, write, implement.	build-ops, content-systems, visual-systems, battlememe, looped-models
Check	Evidence, security, ship gate.	evidence-gate, claim-check, security-ops, oversight-delivery
Frame	Civic, intake, voice, research route.	civic-intelligence, intake, reasoning, aos-orchestrator

6. Dual workspace — how the shop actually runs

Two rooms. One law. Work can start in either room. It does not dual-route the same job. Public civic product stays on public git. Private chrome stays off public UI.

Room	Where it lives	What it is for	What it is not
Space A — AOS session	This cloud conversation. Live desk skill pages. Native file skills. Connected mail / calendar / GitHub / voice / automations. Artifacts out-tray.	Route, score, write packs, clone-brief, civic research, connector work that does not need the Host disk.	Not the Host sidebar roster. Not a claim that 35 named helpers are implemented in this folder.
Space B — Host bench	Grok Bot on the operator box after Host deletes D01–D15 and the Lens Research room.	Day routing (Lead), roster apply (Foreman), cull labels (Terminator), mail/calendar seats, Spec → Implement → Review, source doors 01–15.	Not public-suite UI. Not a second OS spine. File-bus to the PC is on-command only.

Same law in both rooms

OS spine, integrity kernel, GVCP 4, sitting law, target classes, identity-agnostic share, no send / post / pay / delete / publish without YES, human final call. If a room invents a parallel doctrine, the other room does not follow it.

One flow across both rooms

#	Move	Space A (this session)	Space B (Host bench)
1	**Ask**	Talk to the coordinator. Declare the job and the target class.	Talk to Lead. Lead names the next seat and why.
2	**Frame**	aos-orchestrator / intake / civic-intelligence / reasoning.	Brief writes a short brief. Scout gathers. Analyst scores.
3	**Make**	build-ops / content-systems / visual-systems. Native PDF / Word / sheet skills cut the binary.	Spec writes the brief. Implement does the Spec (Cursor cloud agent for multi-file repo; local/visual when you must see it).
4	**Check**	evidence-gate scores. claim-check on contested lines. security-ops on authorized review.	Review pass / fail / gaps vs Spec. Integrity checks.
5	**Package**	oversight-delivery owns contents and checklist. File lands in the artifacts out-tray.	Queue holds drafts until YES. Logger appends the dated trail.
6	**Handoff**	If the job must touch the Host disk, write one named-lane job. Do not freelance on the box.	Lead appends the out-box. Build on the PC answers the in-box when the box is on.
7	**Close**	Synthesis in plain English. Predict labeled Predict. Human final call.	Brief / Lead tell the operator. Nothing sends itself.

Do not dual-route. One product sentence. One named lane. Missing data stays blank. File-bus is on-command only: no secrets in the brief, no git from that bus, no public bind unless the operator says yes. Do not print expanded profile paths. The Host inventory notes the PC file-bus as parked until the app / Build terminal refresh — treat that as current ops state, not as a dead law.

7. Space A — AOS workplace (this session)

Source: live SKILL.md pages in this session, each marked version 5.0 and status active. These are the desks. Closed stub names redirect only and are not opened as live desks. Native office files (Word, PDF, PowerPoint, sheets) stay on native file skills. They are not extra hive desks.

Desk	Need	Duty (from live skill page)
aos-orchestrator	Route / working page	Run AOS. Split the job, keep one working page, hand work to one live desk. File-bus is on-command only. Pile work gets a short sort inside evidence-gate. Do not create a decide helper.
evidence-gate	Ground a claim / score it	Ground and Verify. Score claims. Do not package. Do not ship. Prefer a primary record. Never mint we-have-a-record from confidence or from two weak lanes. Promote path: keep / hold / do-not-promote.
claim-check	Hard check on a contested story	Last hard check before a contested story is treated as settled. Name the claim in one sentence. Read the existing labels. Mark sloppy habits. Say what can be published. Human final call.
civic-intelligence	Civic / records / LPIN	Permits, public records, construction rules, jurisdiction data, influence maps, oversight kits. No municipality names in samples, packs, or public demos. State or national labels are fine.
intake	Outside intake	Choose how to pull web, X, YouTube, GitHub, RSS, or other outside channels. Do not score. Do not ship. Raw pulls stay held until evidence-gate scores them.
build-ops	Build / harden	Make and Correct on products, tools, and games. Declare target class. One target tree per sitting. Map a tool before installing it. Tokens are not a ship.
security-ops	Defensive review	Authorized lab or defensive security process — plan, review, report. Not a live attack kit. Never write attack how-tos. Authorized scope only.

Desk	Need	Duty (from live skill page)
content-systems	Writing / posts / story	Copy, posts, story pages, world text. Not binary office files. Not the meme factory. Public civic copy stays identity-agnostic. Claims in copy still need evidence-gate labels.
visual-systems	Maps / diagrams	Maps, diagrams, symbol systems, visual structure. Pixels themselves use native image tools. No municipality names on sample maps.
oversight-delivery	Kits and send-ready packs	Package after scores exist. Closeout desk. Identity-agnostic on the file. Contact added at send time only. Do not invent scores.
reasoning	Compare / synthesize / plan a check	Grounded comparison, decision support, verification planning, synthesis. Read-only on source material when possible. Predict stays labeled Predict.
looped-models	Looped / recurrent-depth models	Analysis and guidance for looped and recurrent-depth transformer patterns. No mythos name in the trigger line.
battlememe	Meme / roast stills	Pattern-lab desk. Styles include invoice, summons, demand notice, and the frog set. This is not a public civic surface. Do not put operator skill names in a public product footer.

What else exists in Space A this sitting (not extra desks)

Layer	Present this sitting	Rule
Native file skills	PDF, Word, PowerPoint, sheets, plus other bundled media tools.	They cut binaries. oversight-delivery owns pack contents and the checklist.
Connected services	Calendar, mail, GitHub, voice, automations — connected in this session.	Use for the job. Never echo secrets, tokens, or private addresses onto a shareable page.
Artifacts out-tray	Shareable files written by this cloud computer.	Identity-agnostic. Contact at send time. A hole stays a hole.
Working memory	OS spine and project pointers for the operator of this sitting.	Not reprinted as biography. Not a public product.
35 helpers	Count only. Map and floor files named at freeze are missing from this folder.	Do not invent names to fill a table of 35. Stamp any later helper with the public OPSEC floor in section 13.

8. Space B — Host bench after cull (audit)

Source: Host bench inventory dated 2026-09-21. Status on that page: live bench after Farce retire YES; D01–D15 still pending Host sidebar delete. This pack treats those deletes as already applied to the live roster so the report does not keep seats that will not exist after Host finishes the checklist.

Cull — removed from the live report

Standing protocol (Terminator owns): on YES to retire or merge-away, rename to D## DELETE <old name> before any Host delete checklist. Agents cannot delete bots.

Label	Was	Why it is gone from live inventory
D01–D11	Farce line (eleven named Farce seats)	Farce retire YES. Not live work bots.
D12	ALLOW	Labeled DELETE. Not a live seat.
D13	The Stall	Labeled DELETE. Not a live seat.
D14	Chaser	Merged into Tracker. Do not keep a second loop seat.
D15	Editor	Merged into Draft. Do not keep a second writing seat.

Label	Was	Why it is gone from live inventory
Room	Lens Research	Lead-only leftover. Host-delete. Not a kept room.

The eleven Farce given-names are not reprinted as a live roster. The delete labels are enough. Printing them as seats would put retired chrome back on the map.

Counts after cull

Bucket	Count	Note
Live work bots	35	Seats listed below. Sources 01–15 count as seats.
Pending Host sidebar deletes	15 + 1 room	Action for Host. Not live inventory.
Kept rooms	7	Home Office, Builder, Ops Desk, Research Desk, Public Desk, Today Ops, Research Outline.
Dropped rooms	1	Lens Research.
AOS desks in Space A	13	Separate roster from Host bots. Do not add the two numbers and call it one org chart.

Live Host inventory by team

Team	Seat	Job
Command	Lead	Day-to-day routing; next step who/why. Does not create / rename / retire bots.
Command	Foreman	Roster BEFORE→AFTER; hire / rename after YES.
Command	Terminator	Cull audit + D## DELETE labeling protocol.
Command	Floor Talk	Think-aloud only — not build, not research scoring.
Home Office	Brief	One short brief; never invent facts; mark gaps.
Home Office	Inbox	Mail triage + drafts; sort Now / Waiting / Ignore; never send or delete.
Home Office	Calendar	Protect focus blocks; propose moves; never book without YES.
Builder	Spec	Turn vague ask into build brief (goal, constraints, done-when, out of scope).
Builder	Implement	Do the Spec. Prefer Cursor cloud agents for multi-file repo edits; local/visual for smoke you need to see.
Builder	Review	Pass / fail / gaps vs Spec; integrity checks.
Research	Scout	Gather sources + first-pass markers.
Research	Analyst	Compare sources; score claims (we-have-a-record / not-proven / people-disagree).
Research	1000 pieces	Coordinate research outline on incentive / blowback / institutional self-protection methods.
Ops	Tracker	Open loops, owners, next action, date — plus draft nudges (absorbed Chaser). Never send.
Ops	Logger	Append dated audit trail. Never invent history.
Writing	Draft	First drafts + tighten pass (absorbed Editor). No invent / publish / send.
Writing	Queue	Hold drafts and actions until YES.
Custom tools	Sad SpHam	Per-site signup alias + data-use brief from that site’s own policy.
Custom tools	Lockdown	Guided digital account lockdown on official first-party pages.

Team	Seat	Job
Custom tools	Agent Zero	People-search / data-broker removal after consent.

Source shelf 01–15 — official doors only (no extra hires for that job)

#	Line	Seat	Owns
01	Civic	Permit Sources	Permit AHJ, inspection, CO
02	Civic	Code Sources	Adopted codes, zoning, hearings
03	Civic	Flood Sources	Flood, stormwater, environmental pointers
04	Civic	Locate Sources	811, contractor license, owner-of-record
05	Controller	Close Sources	Close, GL, bank, AP, AR (shape only)
06	Controller	Club Revenue Sources	Dues, F&B, gift cards
07	Controller	Club Tax Sources	DR-15, Form 8027, 1099, payroll deposits
08	Controller	Exempt Status Sources	501(c)(7), 990, UBIT
09	Controller	Job Cost Sources	Job-cost, OSHA, SAM, 811 pointer
10	Homestead	House Sources	House budget, receipts, energy lists; flood pointer to Civic
11	OSINT	Congress Sources	Congress.gov members, committees, bills
12	OSINT	Campaign Sources	openFEC, lda.gov lobbying
13	OSINT	Nonprofit Sources	IRS EO BMF + 990 bulk
14	OSINT	Spending Sources	Federal Register, Regulations.gov, USASpending, SAM
15	OSINT	Disclosure Sources	House clerk PDFs, FCC covered list, FOIA reading rooms

Kept rooms

Room	Status
Home Office	Keep
Builder	Keep
Ops Desk	Keep (Tracker, Logger; Chaser removed)
Research Desk	Keep
Public Desk	Keep (Draft, Queue; Editor removed)
Today Ops	Keep — day room
Research Outline	Keep — renamed from the 1000-pieces room

9. Coverage map — who owns which kind of work

Domain	Space A desk	Space B seat
Route / working page	aos-orchestrator	Lead (+ Floor Talk as think-aloud)
Life / home ops (mail, calendar, loops, audit)	connectors + oversight-delivery	Inbox, Calendar, Brief, Tracker, Logger
Build / product	build-ops	Spec → Implement → Review

Domain	Space A desk	Space B seat
Research + honesty labels	intake → evidence-gate → claim-check	Scout → Analyst → Draft → Queue
Civic permits / codes / flood / locate	civic-intelligence	Sources 01–04
Club / controller / tax / close	civic-intelligence + reasoning (shape only)	Sources 05–09
House / homestead	civic-intelligence	Source 10
Congress / campaigns / nonprofits / spending / disclosure	intake + civic-intelligence	Sources 11–15
Privacy / reputation	security-ops (defensive process only)	Sad SpHam, Lockdown, Agent Zero
Roster health	— (not a Space A desk)	Foreman + Terminator
Packs / send-ready files	oversight-delivery + native file skills	Queue holds until YES
Meme / pattern-lab stills	battlememe	— (not a public civic seat)
Looped / recurrent-depth models	looped-models	—

Official xAI-style role aliases (reuse — no extra Host hires in this slate)

xAI-style role	Maps to
Chief of staff	Lead + Home Office (Inbox / Calendar / Brief); Space A coordinator + aos-orchestrator
Eng manager	Spec + Review; Space A build-ops + evidence-gate
Engineer	Implement; Space A build-ops + native file skills
Data analyst	Analyst (+ Scout); Space A evidence-gate + reasoning
PM	Spec + Draft + Floor Talk; Space A aos-orchestrator + content-systems
Sales outbound (drafts only)	Draft + Queue (+ Tracker nudges)
Ops	Tracker + Logger
Roster / org	Foreman (+ Terminator advise)
Recruiter	Gap — not hired; separate YES later if wanted

Honest gaps (only if asked later): Recruiter seat · live Salesforce / CRM sales stack · expenses / invoices specialist · dedicated hiring pipeline.

10. Public product map — what you can clone

These repositories are public. Clone them. Do not treat archived trees as live. Private trees exist; they are not listed here and are not replicable from this pack.

Repo	What it is	Stand-up
AOS-Hive-Brain	Public system brief + interactive 3D reasoning workspace. Release v0.2.0 (seed 2026-08-10-r02). 5 rooms · 20 shapes. Honesty kernel + seed pack. MIT.	git clone https://github.com/AdventureNLearn/AOS-Hive-Brain.git then npm install && npm run dev. Default port in README: 8080. Seed pack: docs/seed/
LPINv3	Light · Proof · Integrity · Navigation. Jobsite + Claims. Device-local. Geographic-agnostic. Guidance only — not a city portal, not legal advice. MIT.	git clone https://github.com/AdventureNLearn/LPINv3.git then npm ci && npm run dev. Port in README: 8090. Then npm run opsec:check and npm run audit:public.

Repo	What it is	Stand-up
NEXOSxLPIN	Experimental evidence desk. Score claims Supported / Not proven yet / Disputed. Training tool — not legal, forensic, or a newsroom CMS. MIT.	Windows: INSTALL.bat then START.bat. Mac/Linux: ./install.sh && ./start.sh. URL in README: http://127.0.0.1:5173
lpin-command-center	Lily Pad Intelligence Network Command Center. Public sources. Empty field = unknown. Distinct from groks-eye-view.	git clone https://github.com/AdventureNLearn/lpin-command-center.git then npm install && npm run dev. Keep Cesium/imagery licenses as shipped.
KeptItFroggy	Civic-accountability atlas of 28 legislatures from public filings. A hole stays a hole. README names FROGNET / GOYNET as a pond-radio joke, not an ethnic movement.	git clone https://github.com/AdventureNLearn/KeptItFroggy.git then npm install && npm run dev. Port in README: 8080. Do not invent sitting names or whip marks.
Grok-Tutor-AOS-Path	Educational craft-learning tutor with thinking tools. Public sample host named in README: gt2samples.grok.me	git clone https://github.com/AdventureNLearn/Grok-Tutor-AOS-Path.git then npm install && npm run dev. Port in README: 8080.
fifty	Daily-action desk for a state-level ALPR ban. Civic-tech / privacy. Public.	git clone https://github.com/AdventureNLearn/fifty.git then npm install && npm run dev.
permit-harbor	US construction-permit AHJ catalog (city, county, territorial desks). Public records catalog.	Clone only. Do not paste sample city rows into any teaching pack or demo.
groks-eye-view	3D Earth cockpit. Public. Inspired by a published MIT demo named in the repo description.	git clone https://github.com/AdventureNLearn/groks-eye-view.git. Follow that README. Do not mix with lpin-command-center.
orbit-desk	MIT kit: turn a catalog of rooms into a traversable 3D sitting with floating workdesks. Not an ephemeris.	git clone https://github.com/AdventureNLearn/orbit-desk.git. Follow that README.

Archived public trees — pointer only, not live: AOS-Public · AOS-v3---LPIN · LPINsuite_v2 · LPINsuite-Archives · Grok-Tutor-AOS-Path-Archive. Frozen archives stay frozen.

Docs drift inside Hive Brain — print it, do not hide it. README / release notes for v0.2.0 say 5 rooms and 20 shapes. docs/ARCHITECTURE.md still describes older v0.1 formations. A careful fork should treat the release notes as current and the older architecture page as history until it is corrected.

11. What this PDF can and cannot stand up

CAN — do these from the pack + public git

- Clone and run the public products in section 10 using only the commands printed there.
- Paste AOS-Hive-Brain/docs/seed/01-NEW-CHAT-SEED.md as message 1 of a brand-new conversation.
- Apply the integrity kernel and GVCP 4 on every claim before you publish a line.
- Declare a target class. Keep public-suite UI free of pattern-lab chrome.
- Run LPINv3 npm run opsec:check and npm run audit:public before any public tag.
- Recreate the 13 desks as short skill pages using the duty cards in section 7.
- Recreate the Host bench as the post-cull roster in section 8. Do not revive D01–D15.
- Keep shareable files identity-agnostic. Add contact at send time only.
- Score claims Supported / Unproven / Disputed with a labeled basis.
- Leave empty cells empty. Incomplete is a valid state.
- Use Space A connectors and Space B seats without mixing their job law.

CANNOT — do not pretend the pack includes these

- The 35 helper implementations or their names. Count only.

- The helper-map file and the OPSEC-floor file named at freeze. Pointers only.
- Host file-bus runtime, host dashboards, or any expanded profile path.
- Private pattern-lab trees. They are not in this pack.
- Municipality fixtures, AHJ sample rows, or a default city portal.
- Operator legal name, phone, mail, town, workplace club, or personal biography.
- Secrets, tokens, API keys, .env values.
- A claim that cloning these repos reproduces the live operator hive.
- A claim that a public product shipped after 2026-09-20. That is not-proven.
- Attack how-tos. Security-ops is defensive review only.
- A live Farce roster, ALLOW, The Stall, Chaser, Editor, or Lens Research as current seats.

Replication test. A stranger with Node LTS, git, and this PDF should be able to run Hive Brain, LPINv3, and NEXOSxLPIN, open a new chat on the seed pack, and operate GVCP 4 on one civic claim without ever seeing private identity. If a step needs a secret or a hometown, the step does not belong in this pack.

12. First sitting — sequence you can run tomorrow

Sitting A — stand up the public workshop (pattern-lab + public-suite, two tracks)

#	Action	Done when
1	Install Node LTS. Confirm git works.	node -v and git --version print.
2	Clone AOS-Hive-Brain. npm install. npm run dev.	Brief page and /hive load locally on the README port.
3	Read docs/OPSEC.md and docs/seed/00-OPSEC-READ-FIRST.md.	You can state In/Out from memory.
4	Clone LPINv3. npm ci. npm run dev. Hit /jobsite and /claims.	Both routes load. No city name was typed into a fixture.
5	npm run opsec:check and npm run audit:public inside LPINv3.	Both commands finish. Failures are written, not ignored.
6	Clone NEXOSxLPIN. Use the README installer. Open the local URL.	You can score one training claim +1 / 0 / –1 with a basis line.
7	Open a brand-new model conversation. Paste only docs/seed/01-NEW-CHAT-SEED.md as message 1.	The model confirms continue-from-record + honest history, not popularity.
8	Give that conversation one job. Declare target class. One tree.	A written working page exists. No second product was loaded.
9	If using Host bench: confirm D01–D15 and Lens Research are gone from the sidebar.	Live roster matches section 8. No Farce seat answers a job.

Sitting B — score one public claim the GOYNET way

- Name the claim in one sentence.
- Intake: pull one primary record (statute, filing, commit, dated page). Hold the raw pull.
- evidence-gate: label we-have-a-record / not-proven / people-disagree. Write Evidence / Inference / Assumption.
- If the story is contested, claim-check reads the labels and marks sloppy habits. It does not quietly rescore.
- oversight-delivery packages only after scores exist. Identity-agnostic file.
- Predict is a next-action line, labeled Predict.

New-chat seed — use the file, do not paraphrase from memory as if it were the file. The canonical seed is AOS-Hive-Brain/docs/seed/01-NEW-CHAT-SEED.md. Rules inside it that you must keep: someone else can continue; honest history, not popularity; Supported / Unproven / Disputed / human decision; no private history in the new chat; wait for the next build instruction after the seed is confirmed.

13. OPSEC floor you can prove

The freeze named an OPSEC-floor file that is not in this folder. The floor you can prove is the public contract already shipped.

In	Out
Public purpose, principles, demo UI, seed markdown, civic tools a stranger can run.	Private history, family material, operator runbooks, port maps, internal path maps.
Integrity language and human final call.	Secrets, OAuth, API keys, tokens, database credentials, .env values.
State or national labels. User-typed locality at run time.	Municipality names in samples, packs, public demos, or default portals.
Replication and fidelity as success criteria.	Shipping by likes, dwell, virality, or token spend.
Honest incomplete state.	Auto-truth. Multi-model agreement treated as proof.
Plain civic language on public surfaces.	Operator skill brands or swarm chrome in public product UI, navigation, or footers.
Post-cull Host roster (section 8) as ops-only map.	Retired Farce / merge-away seats treated as live.

Dual-track release. Local / lab may experiment. Public cut is audited. Quarantine never promotes raw. LPINv3 states this in docs/PUBLIC-RELEASE.md: never set the lab-scale flag on a public product deploy. NEXOSxLPIN states 3D is illustrative, never forensic, and −1 blocks careless share.

Pre-send checklist for this pack (and any pack like it)

- ■ No legal name, phone, mail, town, club, or host path.
- ■ No secrets or .env values.
- ■ No municipality sample rows.
- ■ No private-repo internals.
- ■ No invented helper names.
- ■ No fake post-v5 product ship.
- ■ LPIN dual expansion labeled.
- ■ GOYNET dual source labeled.
- ■ CAN / CANNOT split intact.
- ■ Contact blank until send time.
- ■ D01–D15 and Lens Research not listed as live seats.
- ■ Space A desks and Space B seats not smashed into one fake org chart.

14. v5 freeze → this sitting (the actual delta)

Do not write a victory lap for a one-day window. Here is the scored delta.

Item	State	Note
OS spine named and booted	we-have-a-record	AOS / hive / LPIN / GOYNET / GVCP 4 written as working memory on 2026-09-20.
13 desks live as version-5.0 skill pages	we-have-a-record	Present in this session. Duty cards printed in section 7.
35 helpers + stamped floor	count only	Files not in this folder. No create/retire at boot.
Host bench after Farce retire + pending D## deletes	we-have-a-record	Inventory dated 2026-09-21. This pack applies the cull to the live table.
Public civic git after freeze	not-proven	Last public civic push cluster found: 2026-09-07.
This teaching pack	we-have-a-record	Produced 2026-09-21 as the shareable post-freeze stand-up that includes both rooms.
Hive playtest audits as teaching packs	we-have-a-record (intent)	Working memory on 2026-09-21 states playtest audits are meant as teaching packs for builders, not only ship gates.

Item	State	Note
Product dashboards (Controller / Enterprise / Homestead)	ops-only pointer	Named as product intent. Not shipped in this pack. No host topology printed.
PC file-bus / Build terminal	ops-only / parked	Law remains on-command. Inventory says parked until app + Build terminal refresh.

Predict (labeled — not a record). Next useful jobs, in order, if the human operator agrees: (1) Host finishes D01–D15 + Lens Research sidebar deletes and takes a fresh roster screenshot; (2) restore or rebuild the helper map and OPSEC-floor pages as identity-agnostic files in the workplace folder; (3) correct Hive Brain docs/ARCHITECTURE.md so it matches v0.2.0 rooms/shapes; (4) decide whether any public repo needs a post-v5 tag — only after audit:public is green; (5) keep LPIN public surfaces geographic-agnostic while the civic research line feeds operator dashboards off-pack.

15. Send-time slot (blank on purpose)

This file ships without a person on it. Fill this block only on the copy you actually send. Do not write it back into the canonical pack.

To	_____
From	_____
Date sent	_____
Channel	_____
What you want back	_____

16. Pocket card — run the workshop from one page

Keep this page next to the keyboard on sitting one. It is a reminder, not a substitute for the scores in section 2.

Move	Do this
Name the job	One sitting. One target tree. Declare public-suite / pattern-lab / ops-only / archive / teaching pack.
Name the room	Space A (this AOS session) or Space B (Host bench). Do not dual-route.
Name the claim	One sentence. If there is no claim, do not score theater.
Ground	Point at a primary record or write “none.” Scrapes stay held.
Verify	we-have-a-record / not-proven / people-disagree. Basis: Evidence / Inference / Assumption.
Correct	Change the page so it matches the scores. Do not rewrite history to look finished.
Predict	Next action, labeled Predict. Never a finding.
Route A	Make → build-ops / content / visual / battlememe / looped-models. Check → evidence-gate / claim-check / security-ops / oversight-delivery. Frame → civic-intelligence / intake / reasoning / aos-orchestrator.
Route B	Lead names the seat. Spec → Implement → Review. Scout → Analyst. Inbox / Calendar / Tracker / Logger as life ops. Sources 01–15 as official doors.
Public ship	LPINv3: npm run opsec:check && npm run audit:public. No city fixtures. No skill brands in UI.
New chat	Paste only AOS-Hive-Brain/docs/seed/01-NEW-CHAT-SEED.md as message 1.
Share	Identity-agnostic file. Contact at send time. A hole stays a hole.

Motto. Someone else can continue. Honest history. Honest work.
Close. America First | Truth-Seeking

Pack class: teaching pack · not public-suite UI · not an operator identity file. Sources used this sitting: live desk skill pages v5.0; working-memory OS spine 2026-09-20; Host bench inventory 2026-09-21 (post-cull application); public GitHub READMEs and OPSEC pages listed in section 10; AOS-Hive-Brain seed pack.
